Mike Flynn plays a very large role in Trump's second term (2021-25) from the private sector. The CIA is disbanded entirely in February 2023 after Republicans take back the House. /Pol/ is converted into an "official" open source intelligence platform. This causes it to lose it's appeal. There are "other /pols/" though. The spirit of /pol/ survives.

This is precisely why I came back to November 2020. The entire election was a sting that began in 2018. Jeff Sessions is involved. This is revealed through the legal process in a way that makes the legal process moot. Trump will go on to brag about having had three or four options anyway "without the sting."

Comey and Brennan are the two most high profile names to go to jail. Trump preemptively pardons Obama and the Clintons. He also pardons Biden (but for his association with AVIC and CGN in China).

Will come back to you. Want to answer other anons.

I have a background in logistics and am not qualified to explain the details. But it's close to what layman in the 2010s and early 2020s would have guessed. It is a quantum physics equation that does not become fully operational until we solve the engineering requirements. But once the equation is discovered, the world's private equity firms put capital behind the pursuit. It is still not commonplace. I am not "traveling" so much as I am "touching" a different time. I'm still in 2029 right now.

Also - going into the future is not possible with this equation.

How is it that you aren't allowed to give stock advice.
